TECHNICAL SKILLS

- **Backend & Systems:** RESTful APIs, Node.js, Express, FastAPI, Pytest
- **AI & Data:** RAG Architecture, LangChain, OpenAI API, Anthropic API, Angular
- **Languages:** Python, Go, Java, C, C++, TypeScript, JavaScript, SQL
- **Infrastructure & DevOps:** Docker, Git, Firebase, Google Cloud Platform (GCP), AWS (EC2)

TECHNICAL PROJECTS

TitanSwarm (Autonomous AI Co-Pilot)

Jan 2026 - Present

Personal Project · Python, LangChain, RAG Architecture, Gemini API

- Automated end-to-end job application workflows by architecting an autonomous AI Co-Pilot using Python, LangChain, and Gemini API, resulting in uniquely tailored, ATS-optimized PDF resumes.
- Built a zero-hallucination **RAG Architecture** engine using LangChain, Gemini APIs, and a sandboxed FAISS Vector Store, delivering uniquely tailored, ATS-optimized PDF resumes for each job using only verified user data.
- Designed and implemented a Streamlit Human-in-the-Loop dispatch UI with a Kanban board, enabling users to review, tailor, and manage applications across a full pipeline with persistent state via a SQLite repository layer.
- Applied **Test-Driven Development (TDD)** with a 113-test suite using Pytest, mocking, and async fixtures to validate all components including the scraper, AI tailor, PDF generator, and repository layer.

SFU Course Tracker (sfucourseplanner.me)

Nov 2025 - Jan 2026

Personal Project · Python, Docker, AWS, FastAPI

- Migrated full-stack platform from Azure to **AWS (EC2)**, implementing **Docker** container orchestration to optimize deployments and reduce infrastructure costs.
- Designed and implemented a custom parser to tokenize and evaluate nested boolean prerequisite strings, converting unstructured text into a deterministic Abstract Syntax Tree (AST).
- Engineered a scraping pipeline using Asyncio and HTTPX with semaphore-based rate limiting, increasing data throughput by 10x while respecting server constraints.
- Designed a normalized schema using SQLAlchemy with JSON-type columns to store recursive tree structures, optimizing read performance for complex queries.

TitanStore (Distributed Raft Database)

Jan 2026 - Present

Personal Project · Go, Raft Consensus Algorithm, TCP Sockets, PostgreSQL

- Developed a distributed key-value database in Go from scratch, implementing the Raft consensus protocol for leader election and fault-tolerant log replication across a cluster of nodes.
- Engineered a crash-safe Write-Ahead Log (WAL) with atomic snapshots to guarantee data durability and enable node recovery after failures without data loss.

EDUCATION

Bachelor of Science, Computing Science

May 2025 - Present

Simon Fraser University

- CGPA: 3.74 / 4.33
- Relevant Coursework: Discrete Math (A+), Computer Systems(A), Data Structures & Programming (B+), Linear Algebra(A-).
- Langara College | Associate of Science, Computer Science Jan 2024 - Apr 2025
