Hiring Manager
Accenture

Re: Full Stack Engineer Manager

Nextira's integration into the Accenture AWS Business Group and its commitment to redefining enterprise value through AI and cloud-based solutions is incredibly compelling. I am eager to bring my background in building scalable, AI-driven systems to a team that prioritizes high-performance computing and total enterprise reinvention.

My technical experience aligns with your focus on modern cloud infrastructure and AI. I architected TitanSwarm, an autonomous AI Co-Pilot using Python, LangChain, and FAISS to build a zero-hallucination RAG engine, and developed TitanStore, a distributed memory bank in Go implementing the Raft consensus protocol. Additionally, I migrated the SFU Course Tracker platform to AWS (EC2) using Docker container orchestration, where I engineered a high-throughput scraping pipeline using Asyncio and HTTPX that increased data throughput by 10x.

I am confident that my ability to own complex projects from design to delivery will allow me to contribute effectively to your engineering goals. I look forward to the possibility of discussing how my technical skills in Python, AWS, and distributed systems can support Accenture's clients.

Sincerely,

Zen Nguyen
