Hiring Manager
Intel Corporation

Re: Software Engineering Intern

I am incredibly enthusiastic about the Software Engineering Intern opportunity at Intel Corporation, particularly within the Module Software Solutions Group. The prospect of contributing to the next generation of Intel's test equipment software and engaging in the full software development lifecycle aligns perfectly with my passion for building robust and scalable systems.

My personal project, TitanSwarm, showcases my ability to architect complex automation workflows, including the development of a zero-hallucination RAG engine using LangChain and FAISS, and a distributed memory bank (TitanStore) in Go that implements the Raft consensus protocol for fault tolerance. Furthermore, my SFU Course Tracker project demonstrates my proficiency in migrating full-stack applications to AWS (EC2), utilizing Docker for orchestration, and designing efficient data schemas with FastAPI and SQLAlchemy. These experiences directly reflect the job requirements for feature development, participation in the SDLC, and cross-geo collaboration.

I am eager to bring my technical skills and collaborative spirit to Intel and am confident in my ability to make meaningful contributions to your team. I welcome the opportunity to discuss how my background and project experience can benefit Intel.

Sincerely,

Zen Nguyen
