Hiring Manager
Trimble

Re: Software Engineer

I am incredibly excited by the Software Engineer (AI Foundation) role at Trimble, particularly the opportunity to contribute to building the core infrastructure that transitions AI initiatives from the lab to production within the construction industry. My experience architecting and developing autonomous AI systems and distributed databases aligns perfectly with your focus on scalable, agent-enabled infrastructure.

My personal project, TitanSwarm, showcases my ability to build end-to-end AI workflows, including a zero-hallucination RAG engine using LangChain and OpenAI APIs, which directly relates to your need to integrate frontier model APIs and establish "ground truth" infrastructure. Furthermore, the development of TitanStore, a distributed memory bank in Go implementing the Raft consensus protocol, demonstrates my expertise in building fault-tolerant and durable systems, crucial for large-scale, globally deployed platforms. I also have hands-on experience with FastAPI and AWS EC2 from the SFU Course Tracker project, highlighting my ability to deploy and manage cloud-based applications.

I am eager to leverage my skills in building robust AI systems and distributed technologies to drive innovation at Trimble. I am confident that my proactive approach and experience in developing complex technical solutions would make me a valuable asset to your AI Foundation team. I look forward to discussing how my background can contribute to Trimble's mission.

Sincerely,

Zen Nguyen
